

Northbeam Robotics — Product and Pricing Guide

Product Line Overview

Northbeam offers two hardware product lines (Beam AMRs) and one software platform (BeamOS) sold as a subscription. Hardware is typically sold or leased alongside a BeamOS subscription; BeamOS is not sold as a standalone product without at least one Beam unit deployed.

Beam-2 (Standard AMR)

The Beam-2 is Northbeam's standard autonomous mobile robot, designed for pallet and tote transport in warehouses up to 150,000 square feet. It has a maximum payload of 1,500 lbs, a battery life of approximately 10 operating hours, and supports both LiDAR and camera-based navigation. The Beam-2 is the most widely deployed unit in Northbeam's fleet.

Beam-2X (Heavy-Duty AMR)

The Beam-2X is a heavy-duty variant with a maximum payload of 3,200 lbs, intended for light manufacturing and pallet-heavy distribution centers. It has a reinforced chassis and a slightly reduced battery life of approximately 8 operating hours due to the added motor load.

BeamOS Fleet Software

BeamOS is Northbeam's fleet-management and routing software. It coordinates multiple robots on a shared warehouse floor, manages charging schedules, avoids collisions, and integrates with common warehouse management systems (WMS) via a documented REST API. BeamOS is billed per-robot, per-month, as part of a subscription tier.

Pricing Tiers

Tier	Includes	Price (per robot / month)
Starter	BeamOS core routing, up to 10 robots, email support	\$180
Growth	Starter + WMS API integration, up to 50 robots, priority support	\$260
Enterprise	Growth + custom analytics dashboard, dedicated account manager	\$340 / 24/7 support

Hardware Pricing

The Beam-2 is available for outright purchase at \$28,500 per unit, or as a 36-month lease at \$950 per month per unit. The Beam-2X is available for outright purchase at \$41,000 per unit, or as a 36-month lease at \$1,350 per month per unit. Leases include hardware maintenance; outright purchases require a separate annual maintenance contract at 8% of the unit's purchase price.

Support and Maintenance

All customers on the Growth or Enterprise BeamOS tier receive on-site maintenance visits quarterly. Starter-tier customers receive on-site maintenance only on a paid per-incident basis, billed at \$450 per visit plus travel costs outside a 50-mile radius of a Northbeam service hub.
